written report on theoretical proof behind the lower bound of 8 strategy with 10 boxes

$$\sum_{i=1}^{10} P(\text{win in box } i) = (1/10) \cdot (8/10)^{i-1} \cdot (9/10)^{10-i}$$

$$P(\text{win in box } i) \sum$$

written report on theoretical proof behind the lower bound of 8 strategy with 100 boxes
